

ARIA, MOSAIQ & EPIC Integration

Because we understand and respect that each clinic is unique, we have designed our system as a modular solution.

Our Treatment Module will provide an additional layer of safety by adding an automated verification of the right patient and accessories with the right chart.

If your clinic wants to improve efficiency, our Exam Module offers unprecedented transparency throughout the clinic. The reporting capabilities can assist with identifying areas of possible concern or improvement.

Our system offers increased patient satisfaction across all three modules, but especially in the Reception Module. Patients will appreciate being automatically greeted with an estimated wait time as they enter the clinic. Our automated mobile alerts can reduce wait times for patients if there is an extended clinic delay.

Xecan's customizable, simple system is one-of-a-kind. Increase patient safety and satisfaction while improving clinic efficiency.

Try our system risk free

Our confidence in our system is backed by our 100% success rate with our customers. In order to demonstrate our system's full capabilities, we have introduced a risk free pilot program.

Xecan will install a fully functional start up configuration of our complete system in your clinic.

The pilot program period of 60 days allows clinics to familiarize and test the functionality and benefits of Xecan's system.

If your clinic decides to purchase or rent the system within 30 days of the pilot program ending, we will apply the expense of the pilot program to the capital purchase/rental.

If, after the 60 day period is over, your clinic wishes to discontinue using our system, for whatever reason, we will fully refund the pilot program fee.

Low cost pilot program

Simplicity

Increase Patient Safety

As a patient enters the treatment room, Xecan's system, through integration with ARIA and MOSAIQ, will automatically verify that the patient matches the chart that the therapist has open. In addition to patient verification,

Xecan's System will automatically detect and verify that the required treatment accessories are present. Xecan's Patient & Accessory Verification Interlock will display on monitors in both the treatment and control rooms.

Improve Patient Satisfaction

Clinics can choose to implement either RFID or biometric technology. Patients will either wear their RFID wristband or lanyard or scan their palms as they enter the clinic.

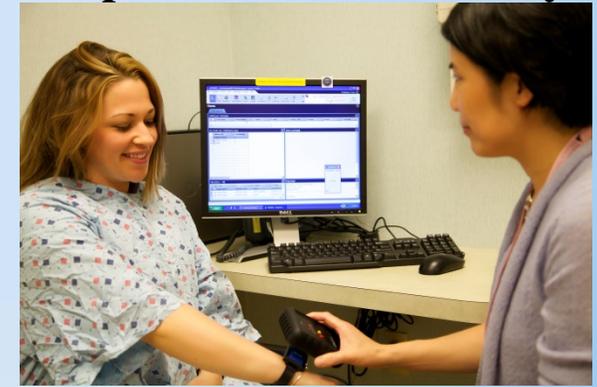

As patients enter, they will be greeted on Xecan's Greeting Screen. We will not only provide visual confirmation that their arrival has been noted, but also an estimated wait time. Patients will know what to expect and can plan accordingly.

Once Xecan's System has greeted a patient, we will automatically check them into either ARIA or MOSAIQ and EPIC. This ensures that the clinic runs efficiently and effectively.

Improve Clinic Efficiency

As a staff member and patient are scanned into an exam room, Xecan's System will automatically launch ARIA or MOSAIQ and EPIC, log them in, and open the patient's chart. When the examination is over, the staff

member simply scans the provided log-out tag. This will automatically close ARIA or MOSAIQ and EPIC, keeping all private patient information protected and, therefore, assisting with HIPAA compliance.

Xecan's Smart Exam Room Whiteboards increase efficiency, streamline staff communication, and improve upon existing workflows.
